**Würzburger  
Mathematischen Kolloquium**

Julius-Maximilians-Universität Würzburg • Fakultät für Mathematik und Informatik

Vicente Cortés

Universität Hamburg

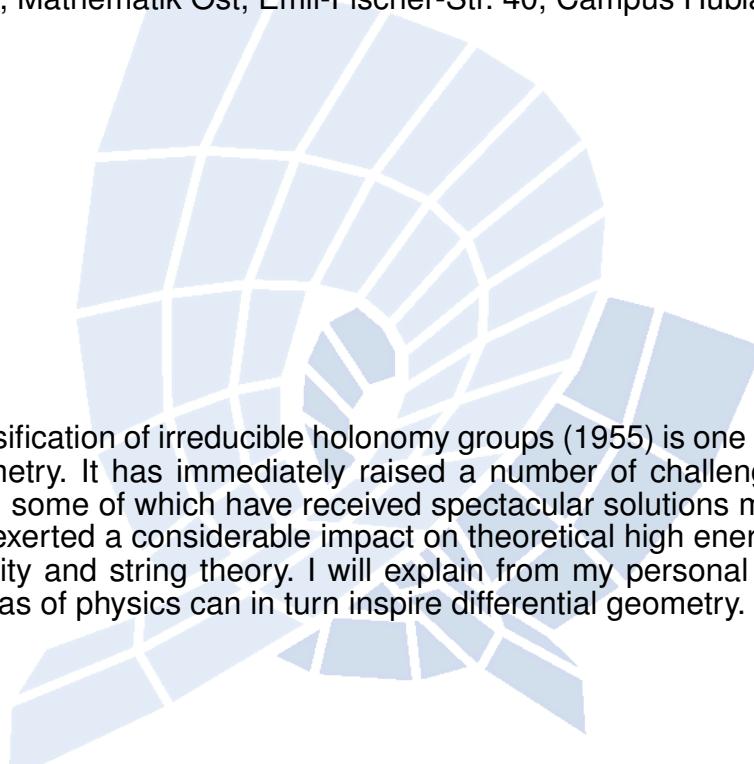

**Differential Geometry inspired by  
Supersymmetry**

Mittwoch, 8. May 2019 • 16:15 Uhr

Raum SE 40, Mathematik Ost, Emil-Fischer-Str. 40, Campus Hubland-Nord

**Inhaltsangabe:**

Marcel Berger's classification of irreducible holonomy groups (1955) is one of the milestones in Riemannian geometry. It has immediately raised a number of challenging problems in differential geometry, some of which have received spectacular solutions much later. These developments have exerted a considerable impact on theoretical high energy physics in the context of supergravity and string theory. I will explain from my personal perspective how ideas from these areas of physics can in turn inspire differential geometry.

Zu diesem Vortrag laden wir Sie herzlich ein.  
Im Anschluss an den Vortrag stehen Tee und Kaffee im Foyer vor dem SE 40 bereit.

Die Dozentinnen und Dozenten der Mathematik
