Neural Networks and Artificial Intelligence

Nowadays, deep learning methods from the field of artificial neural networks play a crucial role in a large variety of applications. Given the many disappointments in the history of neural networks, this unexpected revolution completely changed the way we estimate the potential of artificial intelligence. However, this potential, as I will point out, requires a better mathematical understanding of current methods and the further development of corresponding theories. In my talk, I will provide a historical overview of the field of neural networks, thereby highlighting various mathematical aspects. I will then outline current and future directions of research within artificial intelligence.

Ort: Zentrales Hörsaalgebäude Z6, HS 002

Zeit: Donnerstag, 07.02.19 um **10:30 Uhr**

Zu diesem Vortrag sind Sie herzlich eingeladen.
