Seminar on Deformation Quantization

16. 12. 2022 at 12:30 CET (Note the earlier time!)

Seminarroom SE 30

MARVIN DIPPELL & STEFAN WALDMANN (JMU WÜRZBURG)

An Introduction to `git` in Mathematics

In this little workshop we outline the basic usage of `git` for collaboratively working in mathematics. This becomes interesting when working with other people on common projects (e.g. a paper). However, `git` is already useful for typing a bachelor/master/PhD thesis or lecture notes etc. If you want to participate:

- i.)* Bring your own Laptop
- ii.)* Install Git: Download for Linux and Mac at <https://git-scm.com/>
and for Windows at <https://gitforwindows.org/>
- iii.)* You will need access to the gitlab of the University of Würzburg:
<https://gitlab2.informatik.uni-wuerzburg.de>
If you do not have access yet you can create an account here:
<https://user.informatik.uni-wuerzburg.de/getAccount.php>
Otherwise, please send us a quick mail then we can create an account for you.
- iv.)* If you have an account, please log in once at
<https://gitlab2.informatik.uni-wuerzburg.de>
After that, please send us your username, so we can add you to the correct repository.

Invited by Stefan Waldmann
